

## Opportunity for Learning Methods and Curriculum Professional

Fulcrum Methods ([www.fulcrummethods.com](http://www.fulcrummethods.com)) has an immediate opportunity for a *Curriculum Design Product Specialist* to develop and oversee final aspects of end user product development and integrated training, education and competency assessment tools. Our health care information technology systems lifecycle, change management and self-assessment methodologies are in use at a wide variety of hospital and health system sites across the United States.

This position will:

- Assume an active role in the overall design, content and usability of Fulcrum Methods tools, associated training curricula and end user competency development material
- Oversee development, testing and maintenance of training curricula, including software used for assessment, documentation and course materials
- Work directly with client organizations to analyze organizational and training needs to support curricula and course design, training and documentation
- Maintain communications with Fulcrum Methods users and user organizations to ensure effectiveness of training and competency development; engage in ongoing development dialogue

The successful candidate will have progressive professional experience including 2-4 years of curriculum/course content development, training, trainee competency assessment, 2 years of project, program or product management experience, a BA/BS or equivalent, strong knowledge in learning and organizational effectiveness, practical approaches to experience-based and e-learning, on-line learning management and testing tools, and virtual learning design. Based in our Oakland, CA, headquarters. Significant travel required. Creativity, initiative and entrepreneurial spirit essential.
